

Care and Cleaning

All Weatherscape fabrics should be cleaned on a regular basis in order to prevent the buildup of any excess dirt and prevent the need for frequent deep cleaning.

GENERAL CLEANING

- Lightly brush off any excess debris
- Prepare a cleaning solution of $\frac{1}{4}$ cup mild soap per gallon of warm water.
- Spray fabric with solution and use a sponge or soft bristle brush to clean making sure that the fabric is completely soaked through.
- Rinse thoroughly with clean water and allow fabric to air dry.

CLEANING FOR SPECIFIC STAINS OR MILDEW

Weatherscape fabrics do not stain easily or mildew. However mildew may grow on foreign substances not readily removed from the fabric. If Mildew or staining occurs please follow the instructions below.

- Prepare a cleaning solution of 1 cup of bleach and $\frac{1}{4}$ cup of mild soap per one gallon of water.
- Soak the entire trouble spot with the cleaning solution and scrub with a sponge or soft bristle brush until stain is removed. Apply more solution as necessary.
- Rinse thoroughly with clean water and allow fabric to air dry.
- If the problem area is severe the amount of bleach in the solution may be increased as needed.
- Do not dry clean.

ADDITIONAL CLEANING TIPS

- Protect other non Weatherscape fabrics from bleach exposure as they may fade or discolor when exposed.
- Always rinse thoroughly with water and allow fabric to completely air dry. Machine drying is not necessary.
- DO NOT STEAM, a iron may be used for wrinkles but do not exceed 100°F and test a inconspicuous area before ironing entire piece.
